

ClearPass™

Connector Cleaning Dust Cap

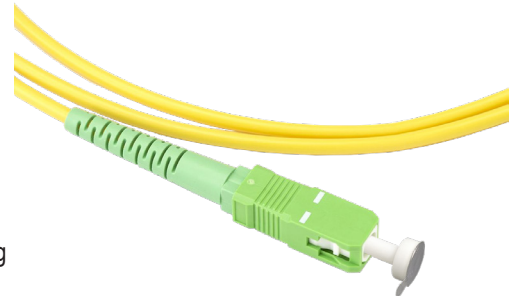

Application

The ClearPass™ Dust Cap is Clearfield's patented, integrated, fiber end face cleaning solution, set to simplify and improve connector cleaning, at rates exceeding industry standard cleaning cards.

Description

ClearPass Dust Cap is Clearfield's latest innovation in fiber connector cleaning technology. Cleaning the end face of the fiber connector before inserting it into an adapter and mating them to another connector is extremely important to meet the demands for ever-increasing network speed and reliability.

Clearfield's ClearPass Dust Cap fiber end face cleaning solution offers a simplified cleaning method while delivering improved connector performance.

Features and Benefits

Integrity

- ClearPass Dust Cap is available for all SC, FC and ST connectors with 2.5mm ferrules
- Patented, integrated fiber end face cleaning solution
- 92% cleaning effectiveness rate when used on Clearfield terminated product
- Effectiveness rate is based on one cleaning pass and the performance greatly exceeds other popular field cleaning solutions such as cassette and card cleaners

Protection

- Clearfield terminated fiber assemblies will come with ClearPass dust cap installed on each connector or included in the Clearfield Pushable connector ship along packages
- ClearPass dust cap protects connector ferrule during handling and installation, while providing a simple cleaning step before plugging connectors in

Access

- Easy to follow instructional video showing how to use
- Single use, minimal step process

Investment

- Reduce connector cleaning supply cost in the field
- Improved fiber network performance

ClearPass™

Connector Cleaning Dust Cap

How to Use A ClearPass Dust Cap:

1. Simply remove the dust cap off the ferrule.
2. Peel off the protective foil.
3. Flip the cap, align cleaning surface with end face, press firmly to clean the connector. Be sure not to twist the dust cap.
4. Now you are ready to connect your clean connector.
